

DID YOU KNOW?

- As of October 2008, Medicare is **no longer reimbursing** healthcare facilities for “reasonably preventable” medical errors. Including falls.
- **Medical expenses** related to falls currently account for more than \$20 billion nationally, and are projected to climb to \$32 billion annually by 2020.
- **Preventing falls** caused by roll-away wheelchairs can stop serious injuries from taking place, save lives as well as tens of millions in insurance costs.
- As America’s aging population grows, the number of falls will also increase. **You can limit exposure** to these costs with the industry’s most effective fall prevention & safety system... the Safe-T-Chair®.
- Falls caused by failure to apply the standard wheelchair brakes are **easily preventable with the Safe-T-Chair®!**
